SUBJECT: PSE SERIES SMALL PUMP TANK / HEAT EXCHANGER SYSTEMS

#5-A-244

7/13/2001

ADVANTAGE PSE Series Small Pump Tank / Heat Exchanger systems are used in many industrial applications, including isolating cooling water from process water, and collecting and cooling gravity return water from open bath extrusion applications.

PSE Series systems are available with polyethylene, epoxy coated, or stainless steel reservoirs from 65 to 200 gallons. Pumps from 1/2hp to 5hp are available, and job specific brazed plate or shell and tube heat exchangers are an integral part of the PSE system.

PSE Systems can be customized to meet unique customer requirements.
